2005 Crop Results

Vitazyme on Gourds
A Testimonial

Grower: Lynn and Kathy Baker
Variety: several
Area planted: 0.129 acre

Location: Blue Moon Gourd Farm, Liberty City, Texas
Previous crop: untilled
Soil type: very fine sandy loam

Fertilization: dolomitic limestone, 195 lb/acre of 10-10-10% N-P₂O₅-K₂O
Vitazyme application: 13 oz/acre in June and July, on the leaves and soil

Comments: “After losing our early gourds due to a heavy rain, we replanted with just a few varieties over the area. It wasn’t long before we began to see growth averaging about a foot a day. At peak season (June) we had leaves that measured 16 to 18 inches wide. Our trellises were completely covered with growth. The miniature vines produced over 100 miniature gourds, and are still producing after Christmas . . . . We believe that the Vitazyme we used was wonderful.”
